Hagerstown, MD • 703.717.2039 • danh_14@pm.me • linkedin.com/in/daniel-herrera14 • daniel-herrera.streamlit.app

PROFESSIONAL SUMMARY

GIAC-certified cybersecurity student at the SANS Technology Institute with hands-on experience in network scanning, log analysis, incident handling, and adversary techniques through NCL, NSA Codebreaker, and home lab work. Brings a disciplined military background and strong analytical skills to troubleshooting, technical problem-solving, and learning new tools quickly.

COMPETENCIES & SKILLS

Technical: Network scanning, defense-in-depth, incident handling, common hacker methodologies and counter measures, TCP/IP, DNS, Firewalls, access control, basic cryptography, log analysis, group policy, system access and PKI, network hardening, countermeasures, maintaining access (backdoors, trojan horses, rootkits)

Tools: tcpdump, Wireshark, Nmap, Masscan, Netcat, Metasploit, BEef, Responder, John the Ripper, Hashcat, SMBBeagle, SMBClient, Hayabusa, FireProx, MSOLSpray, Invoke-MFASweep, FFuF, SQLmap RITA/Zeek, aircrack-ng, Snort, GPG, Microsoft Baseline Security Analyzer

Hardware/OS: Windows, Unix/Linux

Languages: Python, basic Powershell, Bash, basic C

EDUCATION & CERTIFICATIONS

SANS Technology Institute, Bachelor of Applied Cybersecurity

November 2026

Hagerstown Community College, Associates of Science, Cybersecurity

December 2024

GIAC Certifications: Certified Incident Handler (**GCIH**); Security Essentials Certification (**GSEC**); Foundational Cybersecurity Technologies (**GFACT**)

CYBER PROJECTS & ENGAGEMENT

NCL Fall 2025:

- Worked through categories such as OSINT, Cryptography, Password Cracking, Log Analysis, Network Traffic Analysis, Forensics, Scanning & Reconnaissance, Web Exploitation, Enumeration & Exploitation.
- Utilized tools such as Bash, Python, Burpsuite, SQLMap, Dev Tools, Wireshark, Network Miner, Autopsy, Nmap, SMBClient, Binary Ninja, Cyber Chef, Volatility, Hex Editors, DB Browser, Hashcat, and many more to solve these various challenges.
- Individual Game: cyberskyline.com/report/85J2L02FKXJO | Team Game: cyberskyline.com/report/7KEUFMEGFHPK

NSA Codebreaker 2024: Finished Task 0 - 2

- Performed file forensics and data recovery in a virtualized lab environment by identifying file types, detecting anomalies, mounting a ZFS file system, and verifying integrity through hashing.
- Reverse engineered a one-time password seed generator using tools such as Ghidra, Binary Ninja, and IDA Pro, demonstrating proficiency in software analysis, secure coding concepts, and low-level troubleshooting.

Home Lab

- Built and maintained a Proxmox virtualization environment to host services (DNS, Proxy Manager) and isolated vulnerable labs for hands-on testing.
- Deployed and managed containerized applications (Docker) including DVWA (Damn Vulnerable Web App) to practice common web vulnerabilities: XSS, SQL injection, IDOR, directory traversal.

PROFESSIONAL EXPERIENCE

Selector, ADUSA

2022 – Present

- Maintained accuracy and consistency while processing high-volume tasks under strict deadlines, demonstrating strong attention to detail and reliability essential for monitoring logs, reviewing alerts, and validating system data in cyber roles.
- Trained and supported new team members by clearly explaining processes and documenting procedures, reflecting the communication and documentation skills needed in security operations and technical environments.
- Followed established protocols and safety standards while proactively identifying potential issues, highlighting risk awareness, compliance mindset, and the ability to escalate concerns.

Infantry, U.S. Army

2019 – 2022

- Held an active Secret Security Clearance and consistently adhered to strict security, confidentiality, and chain-of-custody protocols while handling sensitive information and equipment.
- Led reconnaissance operations and delivered clear, timely intelligence reporting in high-pressure environments, demonstrating strong situational awareness, decision-making, and communication skills.
- Managed and maintained sensitive operational equipment while training team members on safety and compliance procedures, reinforcing accuracy, accountability, and risk-management principles.
